DETAILED ACTION

1. As per the instant Application having Application number 10/578270; the examiner acknowledges the applicant's submission of the Amendment filed on 6/25/2009.

REASONS FOR ALLOWANCE

2. Per the instant office action, claims 1-13 are considered as allowable subject matter. The following is a statement of reasons for the indication of allowable subject matter:

3. As per claims 1 and 9

The primary reasons for allowance of claims 1 and 9 in the instant applicant is the claimed combination with the inclusion in this claim of the limitation of a file recording apparatus for recording data onto a recording medium which is written in clusters and erased in blocks each composed of a predetermined number of contiguous clusters comprising “...receiving unit... a plurality of file buffers... a data accumulating unit... a judging unit... a writing unit configured, if the judging unit judges affirmatively, to extract a block of data from the accumulated data... and to write the extracted data into a free block of the recording medium, wherein the judging unit judges that the accumulated data is no smaller than the block size, when a total of quotient each calculated by dividing a size of data accumulated in respective one of the file buffers by a cluster size is no smaller than the predetermined number, and the writing unit extracts data from the respective file buffers cluster by cluster until the predetermined number of clusters is reached, and write the extracted data to the free block of the recording medium.” The

Art Unit: 2185

prior art of record neither anticipates nor renders obvious the above-recited combination.

**** See comments bellow regarding the claimed "predetermined number."*

4. As per **claims 5-6 and 12-13**

The primary reasons for allowance of claims **5-6, 12-13** in the instant applicant is the claimed combination with the inclusion in this claim of the limitation of a control method/a program recorded on a computer-readable storage medium for a file recording apparatus that includes a plurality of file buffers each for a different one of a plurality of files and that records data onto a recording medium, the recording medium being written in clusters and erased in blocks each composed of a predetermined number of contiguous clusters, the method comprising "... a receiving step... a data accumulating step... a judging step... a writing step... if the judging step results in affirmative, to extract a block of data from the accumulated data... and to write the extracted data into a free block of the recording medium, wherein the judging step judges that the accumulated data is no smaller than the block size, when a total of quotients each calculated by dividing a size of data accumulated in respective one of the file buffers by a cluster size is no smaller than the predetermined number, and the writing unit extracts data from the respective file buffers cluster by cluster until the predetermined number of clusters is reached, and writes the extracted data to the free block of the recording medium." The prior art of record neither anticipates nor renders obvious the above-recited combination.

**** See comments bellow regarding the claimed "predetermined number."*

5. As per **claim 7**

The primary reasons for allowance of claim **7** in the instant applicant is the claimed combination with the inclusion in this claim of the limitation of a program

Art Unit: 2185

recorded on a computer-readable storage medium for executing by a file recording apparatus, the recording medium being written in clusters and erased in blocks each composed of a predetermined number of contiguous clusters, comprising “... a receiving step... a first judging step... a data accumulating step... a second judging step... a write step of writing, if the second judging step results in the affirmative, a part of the accumulated data... onto the recording medium... the second judging step judges that the accumulated data is no smaller than the block size, when a total of quotients each calculated by dividing a size of data accumulated in the driver data buffer by a cluster size is no smaller than the predetermined number, and the writing step extracts data from the driver data buffer cluster by cluster until the predetermined number of clusters is reached, and writes the extracted data to the free block of the recording medium.” The prior art of record neither anticipates nor renders obvious the above-recited combination.

*** See comments bellow regarding the claimed “predetermined number.”

*** The “predetermined number,” as claimed, wherein each block is composed of a predetermined number of contiguous clusters, is defined in Applicant's Specification as “In the example 316, the parameters indicate that the sector size is 512 B (bytes), the number of sectors per cluster is 32, and the numbers of clusters per block is 4... the cluster size is 16 KB, the block size is 64KB... the cluster and block sizes are not limited to the specific values mentioned herein. With some types of flash memory, the block size may be 128 KB or 256 KB and the cluster size may be 8 KB or 32 KB” (Page 13, lines 12-23). Thus, according to Applicant's Specification the predetermined number or

Art Unit: 2185

number of clusters per block may be 4, 16 or 8, depending on design specifications dictating block size and cluster size of a flash memory.

6. Dependent **claims 2-4, 8 and 10-11** are allowable at least for the reasons recited above including all the limitations of the allowable independent base claim upon which they depend.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

DIRECTION OF FUTURE CORRESPONDENCES

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yaima Campos whose telephone number is (571)272-1232. The examiner can normally be reached on Monday to Friday 8:30 AM to 5:00 PM.
